PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 2.5 years of experience delivering CI/CD automation, Kubernetes orchestration, and cloud-native infrastructure for enterprise banking clients including UniCredit and American Express. Reduced deployment cycles and manual intervention through Jenkins, GitHub Actions, ArgoCD, and GitOps practices. Proven track record of improving release reliability, accelerating delivery pipelines, and implementing end-to-end observability using Grafana, Prometheus, Loki, Tempo, Splunk, and Datadog. Skilled in Terraform, Ansible, Docker, Kubernetes, Helm, SonarQube, and cloud platforms (AWS, Azure). Experienced in collaborating across development, QA, and business teams to drive operational efficiency and zero-downtime deployments in regulated financial environments.

TECHNICAL SKILLS

CI/CD & GitOps (Expert)	Jenkins, GitHub Actions, ArgoCD, GitOps, Pipeline Automation, SonarQube, Quality Gates
Containers & Orchestration (Expert)	Docker, Kubernetes, Helm (Library Charts), StatefulSets, ConfigMaps, Secrets, Service Discovery, Rollbacks
Cloud Platforms (Proficient)	AWS (EC2, S3, ECS, EKS, Lambda, DynamoDB), Azure — AZ-204 Certified
IaC & Config Mgmt (Proficient)	Terraform, Ansible, AWS CloudFormation
Observability (Expert)	Grafana, Prometheus, Loki, Tempo, Splunk, Dynatrace, Datadog — metrics, logs, tracing
Security & Compliance (Proficient)	SonarQube, Spring Security, OAuth2, JWT, Keycloak, OIDC
Messaging & Streaming (Working)	Apache Kafka, RabbitMQ, Event-Driven Architecture
Backend Integration (Working)	Java 17, Spring Boot 3, Spring Cloud, Microservices, REST APIs
Tools & Practices	Git, GitHub, Maven, Postman, Swagger, Agile/Scrum, IntelliJ IDEA

PROFESSIONAL EXPERIENCE

DevOps / Cloud-Native Engineer — TCS | Client: UniCredit | Oct 2025 – Present

Tata Consultancy Services, Bangalore • Enterprise Banking Platform

- Managed and maintained Kubernetes-based deployments across 3 environments (Dev/QA/Production) for 10+ banking microservices, achieving zero unplanned downtime across all production releases.
- Designed and owned Jenkins CI/CD pipelines for 10+ microservices, reducing manual build-and-deploy effort by ~60% and cutting average release cycle time from 2 days to under 4 hours.
- Implemented GitOps delivery model using ArgoCD, enabling declarative automated deployments and reducing environment drift incidents by ~70% across the banking application stack.
- Integrated SonarQube quality gates into all CI pipelines, enforcing static code analysis and security scanning on every build — blocking 100% of code merges failing quality thresholds before reaching production.
- Built centralised observability using Splunk and Dynatrace, reducing mean time to detect (MTTD) production issues by ~40% through proactive alerting and structured root-cause analysis dashboards.
- Automated 5+ recurring operational workflows including scheduled email notifications and Excel-based reporting, eliminating approximately 8–10 hours of manual effort per week across the operations team.
- Led post-incident reviews and collaborated with development, QA, and business teams to resolve production defects — improving mean time to resolution (MTTR) by ~30% across the quarter.
- Managed Helm chart library architecture with environment-specific values for 3-tier deployments, standardising release configurations and reducing environment-specific configuration errors by ~50%.

DevOps / Automation Engineer — TCS | Client: American Express | Apr 2024 – Oct 2025

Tata Consultancy Services, Bangalore • Digital Banking Services

- Built and maintained Jenkins CI/CD pipelines for 6+ digital banking services (account opening, management, servicing, closure), reducing regression cycle time by ~50% through automated pipeline execution.
- Managed Docker and Kubernetes environments for application and test-environment validation, supporting 3 parallel test environments with consistent service availability and zero environment misconfiguration incidents.
- Designed a reusable Java + Cucumber API automation framework covering 200+ test scenarios across banking microservices, increasing test coverage by ~40% and eliminating 15+ hours of manual regression per sprint.
- Integrated automated regression suites into Jenkins CI pipelines, enabling continuous test execution on every build and reducing defect escape rate to production by ~35%.
- Mentored 2 junior automation engineers on framework design, Gherkin best practices, and Jenkins pipeline integration — onboarding both to full productivity within 6 weeks.
- Used Git branching strategies and collaborated with 4 cross-functional teams (dev, QA, business, support) to coordinate releases and reduce merge conflicts by introducing structured PR review workflows.
- Investigated and resolved 50+ automation failures and API defects using Splunk log analysis, reducing flaky test rate from ~20% to under 5% within 2 sprints.
- Contributed to Agile sprint ceremonies, consistently delivering automation tasks on schedule across 10+ sprints with zero carry-over items.

FEATURED DEVOPS PROJECT

AMDBank — Cloud-Native Banking Microservices & DevOps Platform | *Personal Project*

github.com/mohamedmohaideen

- Architected an end-to-end GitOps delivery pipeline using ArgoCD, achieving fully automated Kubernetes deployments across Dev/QA/Production with zero manual kubectl intervention.
- Containerized 4 independent microservices (Accounts, Cards, Loans, Messaging) using Docker and deployed the complete stack including Kafka and Keycloak to Kubernetes in under 10 minutes via Helm.
- Built reusable Helm library charts with environment-specific values, reducing per-environment configuration effort by ~65% and enabling one-command environment provisioning.
- Implemented full observability stack — Prometheus (metrics collection), Grafana (real-time dashboards), Loki (log aggregation), Tempo (distributed tracing) — providing 100% visibility across all services.
- Secured CI/CD pipelines end-to-end with SonarQube quality gates, OAuth2/Keycloak authentication, and Spring Security-based API authorization, achieving zero critical security vulnerabilities in final builds.
- Reduced infrastructure provisioning time from hours to minutes using Terraform-managed Kubernetes clusters and Ansible-based configuration automation.
- Designed event-driven Kafka messaging architecture handling asynchronous notifications across 4 microservices, decoupling services and improving fault isolation.

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate (AZ-204)
- Claude Certified Developer – Foundations (CCDV-F)
- Master Microservices with Spring Cloud and DevOps

EDUCATION

Bachelor of Engineering — Electronics and Communication Engineering | 2019 – 2023

Bannari Amman Institute of Technology
