PROFESSIONAL SUMMARY

Cloud-Native Java Developer with 3 years of experience at Tata Consultancy Services (TCS), specializing in enterprise banking applications, microservices, REST APIs, cloud-native development, and DevOps practices. Experienced in Java 17/21, Spring Boot 3/4, Spring Framework 6/7, Spring Cloud, Apache Kafka, Docker, Kubernetes, Helm, AWS, Terraform, Jenkins, GitOps, and ArgoCD. Strong hands-on experience building and troubleshooting distributed microservices, implementing API security with Spring Security, OAuth2, OIDC, JWT, and Keycloak, and establishing observability using Prometheus, Grafana, Dynatrace, Loki, and Tempo. Experienced across the complete application lifecycle from backend development and API integration to containerization, CI/CD, deployment, monitoring, and production troubleshooting.

CORE TECHNICAL SKILLS

- **Programming Languages:** Java 17/21, SQL, Bash, Linux Shell Scripting
- **Frameworks:** Spring Boot 3/4, Spring Framework 6/7, Spring Cloud, Spring Security
- **Microservices & APIs:** Microservices Architecture, REST APIs, OpenAPI, Swagger, OpenFeign, API Gateway, Eureka, Config Server, Circuit Breaker, Retry, Rate Limiting
- **Messaging:** Apache Kafka, RabbitMQ, Event-Driven Architecture, Asynchronous Communication
- **Containers & Orchestration:** Docker, Kubernetes, Helm Charts, Kubernetes Services, ConfigMaps, Secrets, Deployments, StatefulSets, EKS, ECS
- **Cloud Platforms:** AWS, Azure, EKS, ECS, EC2, S3, RDS, DynamoDB, VPC, IAM
- **DevOps & CI/CD:** Jenkins, GitHub Actions, GitLab CI, Terraform, Ansible, GitOps, ArgoCD, AWS CodePipeline, AWS CodeBuild, AWS CodeDeploy
- **Security:** Keycloak, Spring Security, OAuth2, OIDC, JWT, Authentication, Authorization
- **Observability:** Distributed Tracing, Prometheus, Grafana, Dynatrace, Splunk, Loki, Tempo, OpenTelemetry
- **Testing:** JUnit, Cucumber, Postman, API Automation, REST API Testing, Integration Testing, Functional Testing, Regression Testing, Performance Testing
- **Databases:** MySQL, Oracle, PostgreSQL, Redis, H2, JPA, Hibernate
- **Tools:** Git, GitHub, Maven, IntelliJ IDEA, Linux

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS)

Bangalore, India

Software Engineer - Cloud-Native Java Developer

Nov 2025 - Present

Client: UniCredit - Enterprise Banking Platform

- Architected Java 21 and Spring Boot 4 microservices across 8-10 active banking services, strengthening scalable backend service delivery for enterprise banking workflows.
- Engineered Spring Cloud, REST APIs, OpenFeign, API Gateway, Eureka, and centralized configuration components, improving service-to-service communication across distributed applications.
- Orchestrated Docker and Kubernetes deployments with Helm Charts, ConfigMaps, Services, and application configuration, enabling repeatable cloud-native deployment and troubleshooting.
- Streamlined Jenkins CI/CD pipelines and GitOps deployment practices with ArgoCD, improving application build, release, and deployment consistency across environments.
- Optimized production troubleshooting using Dynatrace, Splunk, Prometheus, and Grafana, reducing root-cause-analysis resolution time by approximately 40%.
- Engineered Apache Kafka-based event-driven integrations, improving asynchronous communication and decoupling between distributed banking services.
- Strengthened application security using Spring Security, OAuth2, JWT, OIDC, and Keycloak concepts, supporting secure authentication and authorization across backend services.
- Resolved distributed application issues involving Kubernetes Services, configuration, service discovery, API Gateway, Kafka, and centralized logging, improving application reliability during production support.
- Collaborated with development, business, DevOps, and support teams in Agile/Scrum environments, accelerating incident analysis, defect resolution, and production validation.

Assistant Systems Engineer - Cloud-Native Automation & Integration Engineer Mar 2024 - Oct 2025

Client: American Express - Global Financial Services

- Engineered Java and Spring Boot API automation frameworks using Cucumber, JUnit, Postman, and Swagger/OpenAPI, strengthening functional and regression validation for banking microservices.
- Developed REST API validation and integration-testing components, improving repeatability of request, response,

business-rule, and service-integration verification.

- Containerized API automation components using Docker and Kubernetes, enabling consistent execution and validation across containerized application environments.
- Automated CI/CD execution through Jenkins and AWS delivery services, improving repeatability of build, test, and deployment workflows.
- Provisioned AWS environments using VPC, Security Groups, EC2, EBS, and IAM configurations, creating isolated infrastructure for automated application testing.
- Integrated Splunk-based application logging and troubleshooting workflows, reducing recurring service-integration investigation effort by approximately 30%.
- Optimized regression validation through automated API test execution, reducing repetitive manual verification across banking application workflows.
- Collaborated with development, QA, business, and support teams in Agile environments, accelerating defect investigation, fix validation, and release readiness.

PRODUCTION PROJECTS

AMDBank - Cloud-Native Banking Microservices & DevOps Platform

Technology Stack: Java 21, Spring Boot 4, Spring Framework 7, Spring Cloud, Apache Kafka, Docker, Kubernetes, Helm, Keycloak, REST APIs, Prometheus, Grafana, Loki, Tempo, Terraform, Jenkins, ArgoCD, AWS

- Architected a cloud-native banking platform comprising independent Accounts, Cards, Loans, and Messaging microservices, demonstrating scalable microservice decomposition and independent service delivery.
- Engineered Spring Boot and Spring Cloud REST APIs with OpenFeign, Eureka Service Discovery, API Gateway, and Config Server, enabling resilient communication and centralized configuration across distributed services.
- Decoupled banking workflows using Apache Kafka and Event-Driven Architecture, enabling asynchronous communication between independent microservices.
- Secured REST APIs using Spring Security, OAuth2, OIDC, JWT, and Keycloak, implementing authentication and authorization for protected backend resources.
- Containerized Java microservices using Docker and orchestrated deployments through Kubernetes and Helm Charts, enabling repeatable application deployment and lifecycle management.
- Implemented Kubernetes Services, ConfigMaps, Secrets, Deployments, StatefulSets, upgrades, and rollbacks through Helm, improving deployment consistency across environments.
- Provisioned cloud infrastructure using Terraform and AWS services, establishing Infrastructure as Code practices for repeatable environment provisioning.
- Automated application delivery using Jenkins and GitOps principles with ArgoCD, creating a repeatable CI/CD workflow from source control through Kubernetes deployment.
- Implemented Prometheus and Grafana observability, improving visibility into application and infrastructure metrics.
- Implemented Loki and Tempo with Grafana for centralized logging and distributed tracing, enabling end-to-end investigation of microservice communication and application failures.
- Integrated containerized services, messaging, security, observability, CI/CD, and Kubernetes orchestration into an end-to-end cloud-native banking architecture.

GitHub: AMDBank Cloud-Native Banking Microservices DevOps Platform

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate (AZ-204)
- Claude Certified Developer - Foundations (CCDV-F)
- Master Microservices with Spring Cloud and DevOps

EDUCATION

Bachelor of Engineering - Electronics and Communication Engineering

Bannari Amman Institute of Technology

2019 - 2023

ADDITIONAL INFORMATION

Domain: Banking and Financial Services

Methodologies: Agile, Scrum, Code Review, Debugging, Root-Cause Analysis, Production Support

Target Roles: Cloud-Native Java Developer, Java Backend Developer, Spring Boot Developer, Microservices Developer
